

CSS white-space property

Given this CSS code:

```
p {  
  width:100px;  
  background-color:orange;  
  margin:10px 0;  
  font-family:monospace;  
}
```

and this HTML code:

```
<p>  
P  
  A  
    R  
      A  
        G  
          R  
            A  
              P  
                H  
</p>
```

Depending on the white-space property, the resulting presentation will be:

normal

The text is displayed in three lines, wrapped to fit the 100px width of the orange background box. The first line contains 'P A R', the second line contains 'A G R', and the third line contains 'A P H'.

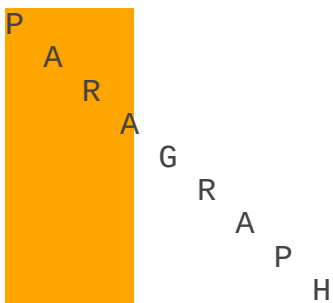

```
P A R  
A G R  
A P H
```

nowrap

The text is displayed on a single line, wrapping to the right of the orange background box. The first 100px of the text ('P A R A') is inside the box, and the rest ('G R A P H') is outside.

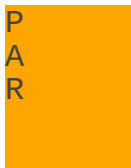

```
P A R A G R A P H
```

pre

The text is displayed in a preformatted manner, preserving all spaces and line breaks. The orange background box is tall and narrow, containing only the first line 'P A R'. The rest of the text is displayed to the right of the box, following the original HTML structure.

```
P  
  A  
    R  
      A  
        G  
          R  
            A  
              P  
                H
```

pre-wrap

The text is displayed in a preformatted manner, but it wraps within the orange background box. The first line 'P A R' is inside the box, and the rest of the text is wrapped onto the same line.

```
P  
A  
R
```

A
G
R
A
P
H
